About San Diego CityWorks

At any given time, the City of San Diego has hundreds of construction projects in planning, design, or construction. Many of these projects are pipelines or other work affecting the public right-of-way. These and other construction, maintenance, and road resurfacing projects require coordination.

San Diego CityWorks uses geographical information systems technology to create online maps that

display City projects in an easy to use, up-to-date format. San Diego CityWorks is now available on the internet for access by the community at large as well as on CityNet, the City's intranet, for access by City elected officials, executive management, project managers, and public information personnel. The information can also be used to help the community understand City projects by using San Diego CityWorks in City meeting facilities with access to CityNet, or now any facility with access to the internet.

How To Start The Application

From the internet, select the following web link:
http://citymap.sandiego.gov/cityworks/index.html

How To See Projects In Your Area

1. Select "**Create Map by Category**" button from the San Diego CityWorks introduction page **or** if already in the Map Viewer, click on the "**View options**" tab.

2. Choose one of the selections from the "**map location**" drop down list (no additional selection is required if the "Keep current selection" map location is selected)

a. For options with multiple choices, choose one of the values in the "**search for**" drop down list.

b. Enter a **value** (such as an address or intersection) in the text box below the map location selection

3. Select the **project phase** by clicking on the check box located on the left side of each project phase

4. Select the **CIP Groups or Project Type** by clicking on the check box located on the left side of each CIP Group or Project Type.

5. To view project reports for each project meeting the criteria selected in 2 through 4 above, click on "view report for all visible projects". To view project report information only upon selection of a specific project or area click on "Manually select projects".

6. Select optional Map layers as desired. You must zoom in to see information on the "Parcel" layer.

7. Press **OK** button
8. The map will move to the location selected and display the chosen projects and reports.
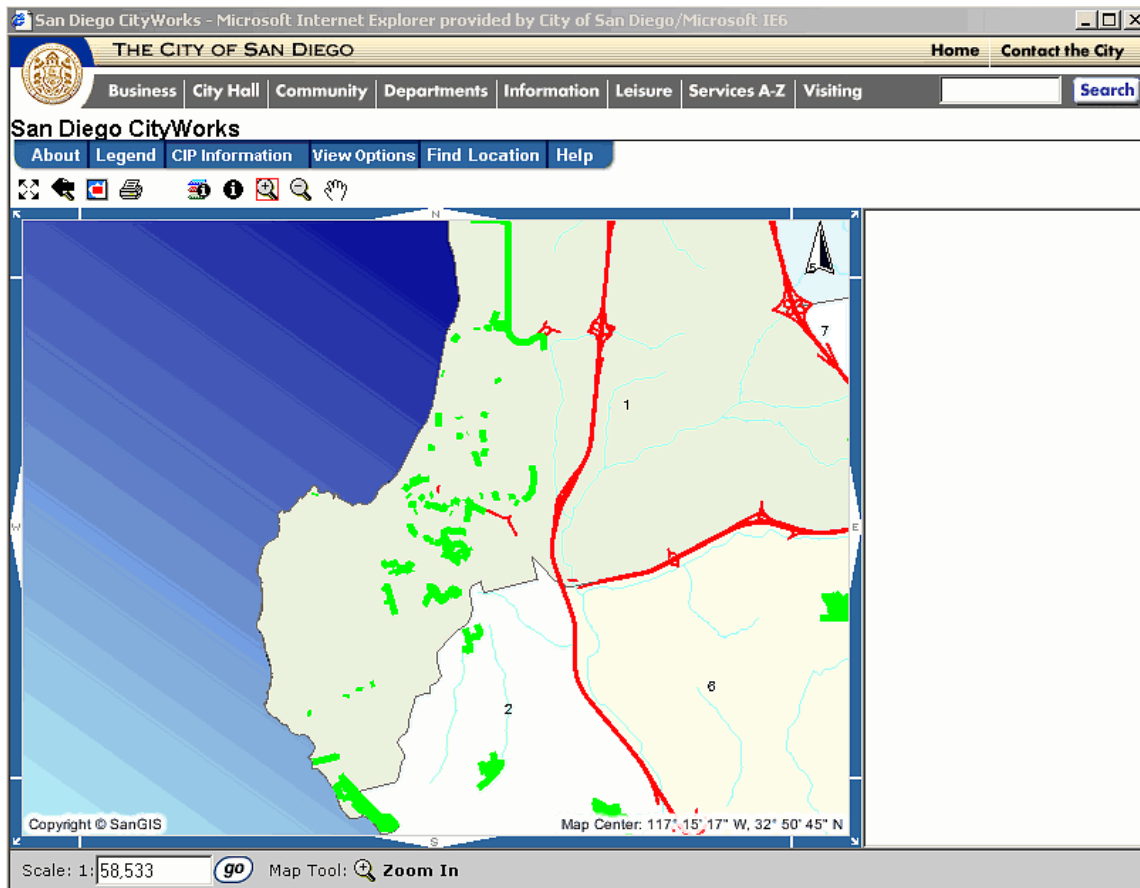

How to View Project Report Information
1. Verify that the **identify CIP** tool is active (ensure that "Identify CIP" is displayed in the status bar under the map)
2. Click a **point** or **drag a rectangle** on the map
3. When multiple projects are found, select a project on the "**Identify Results**" screen by clicking on the project link to bring the user directly to the project information for the selected project
4. Click "**Close**" button to return to the map.
